## DBS Group – Environmental Policy

DBS Group are committed to proactive environmental management throughout our business activities and aim to positively influence stakeholders, especially customers and suppliers.

We maintain management systems, procedures and training activities to ensure compliance with all relevant laws, regulations and standards and to take advantage of all environmental progress and developments.

We strive to manage the environmental impacts of our operations during their entire life cycle, actively seeking a reduction in the negative impacts upon the environment.

We do this by:

- Educating our suppliers and customers with regard to the environmental impact of our projects and products.
- Engaging with the communities and organisations affected by our operations to understand their views and aspirations.
- Ensuring our employees and supply chain have the desire to continually improve our environmental performance
- Actively seeing out suppliers who prove their environmental commitment.
- Assessing and reducing the environmental impacts of our work.

We aim to:

- Embrace the circular economy, generating zero waste through reducing demand, reusing and recycling.
- Select and use materials that are benign to people and the environment.
- Reduce the demand for, conserve and recycle water resources.
- Use energy efficiently and strive to reduce pollution in our projects, vehicles and equipment.
- Minimise the negative impact of our operations on water, land and soil quality.

At DBS Group we are promoting a culture of social and environmental responsibility. We aim for continual improvement, setting objectives and targets for key activities and developing action plans for improvement.
